Summary

Product configuration and CPQ professional with 7+ years owning configuration rules, product models, BOMs, and routings across CPQ, configurator, and ERP systems for CTO/MTO discrete manufacturing, validating every rule change through testing and UAT. Reduced quoting errors by 30% and managed 120+ engineering changes per month at 99.5% on-time completion.

Work Experience

- **Product Owner | Bantrly | Plano, TX** *Feb 2026 – May 2026*
  - Owned requirements and release scope for a new AI B2B product, leading 15+ customer and stakeholder interviews to translate ambiguous business needs into validated requirements, prioritized features, and clear, testable acceptance criteria.
  - Launched the MVP within 3 months with zero release rollbacks and 2 paying pilots by cutting scope by 50% to core functionality, enforcing acceptance criteria, and running agile sprints in Jira and Confluence with engineering and design.
  - Cut manual documentation effort by 40% by building LLM workflow automation in n8n, and validated product scope with the founders on a working prototype built with Claude in VS Code, avoiding an estimated 3+ weeks of engineering rework.
- **Product Information Analyst | MillerKnoll (formerly Herman Miller) | Bangalore, India** *Feb 2020 – Dec 2023*
  - Owned the configuration rules behind Infor CPQ and order management as product owner, implementing 120+ engineering changes per month at 99.5% on-time completion and cutting cycle time by 45% through process improvement.
  - Reduced quoting errors by 30% as single-point owner of order fallout for North American B2B dealers and OEMs, protecting multi-million-dollar orders through cross-functional root-cause analysis with engineering, manufacturing, and sales teams.
  - Built multi-level, constraint-based configuration models in the Infor LN Product Configurator (PCF) for CTO/MTO product lines, translating engineering drawings and EBOMs into generic (150%) manufacturing BOMs and routings with effectivity.
  - Translated engineering, manufacturing, and commercial requirements into configuration rules, documented each in decision tables, validated every change through test configurations and UAT, and trained sales and B2B dealer users.
  - Maintained pricing accuracy across Infor CPQ and dealer specification tools (CET, pCon) by publishing option-code translations, price lists, surcharge rules, and dealer price matrices; cut pricing audit cycles by 25% with SQL checks.
  - Blocked unsupported parts and invalid configurations from customer orders across 7 brands by governing SKU orderability and lifecycle states from NPI through sustaining engineering to obsolescence, managing component end-of-life risk.
  - Improved operational efficiency by 34% as owner of CMF master data for the APAC and EMEA region product portfolio, harmonizing color, material, and finish records across Infor LN and Infor SyteLine during the ERP data migration.
- **Founder | Gogetters | Navi Mumbai, India** *Sep 2018 – Jan 2020*
  - Launched a self-funded D2C brand on its own storefront and marketplaces, growing monthly revenue 3x at a 38% gross margin over 15 months by negotiating better terms with 12 suppliers and cutting acquisition cost by 30%.
- **Senior Analyst | Lumina Datamatics | Navi Mumbai, India** *Jun 2016 – Aug 2018*
  - Built rule-based variant models for 5,000+ configurable HVAC, motor, and power-equipment products, defining the features, options, and compatibility constraints governing every orderable product combination before production release.
  - Cut production configuration errors by 30% by structuring multi-level CTO BOMs for each configurable product family and validating every rule change before release, preventing unbuildable combinations from reaching customers or production.
- **Configuration Associate | Reliance Jio (Contract) | Navi Mumbai, India** *Feb 2015 – May 2016*
  - Maintained option rules and configuration models in the product configurator for 300+ identity access controller variants (HID, Sterna) and validated every new rule through test configurations before release to sales; kept released BOMs and part data in PLM current by processing 50+ engineering changes per month at 99% on-time completion with zero escapes.

Education

- **Northeastern University** *San Jose, CA*
  Master of Science in Information Systems, GPA 3.87/4.0 *Jan 2024 – Dec 2025*
- **University of Pune (MIT Pune)** *Pune, India*
  Bachelor of Engineering in Electronics and Telecommunications *May 2010 – May 2014*

Skills

- **Product Configuration and CPQ:** Variant configuration, constraint-based modeling, configuration rules, CTO/MTO, generic (150%) BOM, BOM management, routings, pricing management, UAT, quote-to-order, master data governance
- **Systems:** Infor LN Product Configurator (PCF), Infor CPQ, Infor LN ERP, Infor SyteLine ERP, PLM, PDM, CET, pCon
- **Data and AI:** SQL, Power BI, Tableau, Excel, LLM workflow automation and AI agents (n8n), OpenAI and Claude API integrations, prompt engineering, AI-assisted coding (Claude Code)
